Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-10,12,14,17-20 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Legge et al (2002/0034978).

Legge shows passive (battery-less) RFID device having stored thereon data bits and expiration information that communicates in an inductive manner. See Abstract and paragraphs 22 and 26. Legge shows the transponder to include time criteria and/or credit criteria for providing expiration when the credits or time expires. See paragraphs 41 and 43. Legge additionally shows data bits as providing access only if the device is age appropriate, violence appropriate or height appropriate for rides. See paragraphs 42 and 43. The transponder is programmed at the purchase location, paragraph 29.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

. Art Unit: 2635

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 11 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Legge as applied to claim 1 above, and further in view of Eberhart (6404339).

In an analogous art, Eberhart shows a transponder that uses a dipole antenna to provide capacitive coupling for transmitting data from a transponder to a reader.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have used the dipole antenna and capacitive coupling of Eberhart in the Legge system in order to provide secure reading of the transponders.

3. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Legge as applied to claim 1 above, and further in view of Robinson (4591854).

In an analogous art, Robinson shows a communication device where the information is passed on via a contact interface, thus limiting the communication to very close range and providing secure access communication. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have used the contact coupling of Robinson in the Legge system in order to provide secure reading of the transponders.
